

FEATURES

- Automatically cleans the entire **REACTR™** system with every backwash
- Ideal for situations where media bed becomes fouled by high levels of ferric iron, iron or sulfur bacteria* and tannins*
- Installs in minutes
- Can be added to any existing **REACTR™** system without changes to the plumbing or electrical wiring
- Effectively uses chlorine*
- No pump adjustments required
- No pump check valves to maintain

CSI first introduced the **REACTR™**, a truly innovative chemical free oxidation system for the reduction of iron, manganese and sulfur gas. Now after extensive research and development CSI is proud to introduce the **OXYCLEAN™** Automatic **REACTR™** Cleansing System. A system that will enhance the operating performance of a **REACTR™** installed on exceptionally poor water quality situations. Situations that are normally tough to handle and require a high level of maintenance can now be solved with the **OXYCLEAN™** Automatic Cleansing System.

Plugged pipes and fouled media beds can be the result of low levels of iron or sulfur bacteria*, tannins* and high levels of ferric iron. Many times these situations require a messy, time consuming service call. The **OXYCLEAN™** Automatic Cleansing System can reduce these types of calls.

Installed in minutes the **OXYCLEAN™** System will automatically inject chlorine* during every backwash to clean the **entire REACTR™** system and associated plumbing such as inlet plumbing, tank tees, etc.

Every **REACTR™** System built has the optional **OXYCLEAN™** in mind, installation is easy and can be done during or after installation of the **REACTR™** without any changes to the plumbing or electrical wiring.

Install the **REACTR™** with the **OXYCLEAN™** Automatic Cleansing System today and reduce those annoying service calls tomorrow.

* Not to be substituted for accepted disinfection techniques for moderate or high levels of these contaminants.

Typical Installation
